INTRODUCTION

Welcome to the United States Department of Agriculture (USDA) Supplemental Nutrition Assistance Program Education (SNAP-Ed) Obesity Prevention Toolkit.

The goal of SNAP-Ed is to improve the likelihood that low-income individuals, including those eligible for SNAP, will make healthy food choices within a limited budget and choose physically active lifestyles consistent with the current [*Dietary Guidelines for Americans, 2008 Physical Activity Guidelines for Americans*](#), and [*MyPlate*](#). In Fiscal Year 2016, the USDA's Food and Nutrition Service (FNS) authorized \$408 million to all 50 states, the District of Columbia, Guam, and the Virgin Islands to provide nutrition education and obesity prevention services, using interventions that include direct education; social marketing; and policy, systems, and environmental (PSE) changes.

This toolkit was developed by USDA's FNS, The Association of SNAP Nutrition Education Administrators (ASNNA), and the National Collaborative on Childhood Obesity Research (NCCOR), a partnership between the Centers for Disease Control and Prevention (CDC), the National Institutes of Health (NIH), the Robert Wood Johnson Foundation, and USDA. It is designed and updated to help state SNAP-Ed administrative and implementing agencies identify evidence-based obesity prevention programs and PSE strategies and interventions to include in their SNAP-Ed Plans for fiscal year (FY) 2016 and beyond to comply with the requirement that SNAP-Ed Plans must include multi-level interventions or public health approaches. PSE strategies and interventions are a hallmark of multi-level

interventions or public health approaches. The Healthy Hunger-Free Kids Act, of 2010 (HHFKA), Sec.241, transformed SNAP-Ed into a Nutrition Education and Obesity Prevention Grant Program, explicitly adopting obesity prevention as a major emphasis and embracing comprehensive community-based and public health approaches. The Act required FNS to consult with the Director of CDC and other stakeholders to identify evidence-based strategies to incorporate into SNAP-Ed programming.

The [SNAP-Ed Plan Guidance](#) details the goal, focus, and key behavioral outcomes for SNAP-Ed programming.

SNAP-Ed Key Behavioral Outcomes

- Make half your plate fruits and vegetables, at least half your grains whole grains, and switch to fat-free or low-fat milk and milk products.
- Enjoy your food, but eat less; avoid oversized portions; drink water instead of sugary drinks; and compare sodium in foods like soup, bread, and frozen meals and choose the foods with lower numbers.
- Increase physical activity and reduce time spent in sedentary behaviors as part of a healthy lifestyle.
- Maintain appropriate calorie balance during each stage of life -- childhood, adolescence, adulthood, pregnancy and breastfeeding, and older age.

To support efforts to reduce disparities in these key behaviors between the low-income audience and the general population, CDC has identified obesity prevention and control strategies and interventions in [Table 1](#). CDC believes these strategies will have a much broader population reach and impact and be less costly, more sustainable, and less prone to stigmatize individuals who are overweight or obese than programs focused on individual behavior change. PSE strategies and complementary marketing messages across communication channels can make it easier and more appealing for children and their families to make healthier dietary and physical activity choices.

This toolkit identifies evidence-based and emerging PSE strategies to help reach low-income households that are impacted most by health disparities. As outlined in the SNAP-Ed Guidance, evidence-based is defined as the integration of the best research evidence with the best available practice-based evidence and is identified using three categories: research-tested, practice-tested, and emerging. Interventions carried over from the FY14 toolkit are considered to be evidence-based interventions, but there is not more specific information about the evidence category. All of the interventions added to the toolkit for FY16 have been designated as research-tested, practice-tested, or emerging. In keeping with the SNAP-Ed Guidance, FNS expects that when an emerging intervention is included in a state's SNAP-Ed Plan, the agency will specify how the intervention will be evaluated. In addition, this iteration highlights PSEs and social marketing. The toolkit will continue to be updated to ensure accurate designation of the evidence available for each intervention. FNS also created a [checklist for evidence-based programs](#) to classify interventions according to levels of evidence.

KEY TERMS

Strategies provide broad approaches about the best options available for intervening.

Interventions can be research-tested or practice-based and are implemented changes that generally have core elements and multiple components. They aim to provide ways of intervening that are likely to have a public health impact.

Research-tested interventions have been published in the peer-reviewed literature.

Practice-tested interventions have evidence derived from practice in the form of evaluation data or reports.

Emerging interventions are practice-based interventions that have been successfully implemented and show promise based on their underlying theory and approach but have not yet been fully evaluated in the field.

Resources are toolkits or assessment instruments that will support interventions.

Source: CenterTRT
http://www.centertrt.org/?p=interventions_overview

This edition of the toolkit adds **20** evidence-based strategies and interventions available for states to use in crafting their SNAP-Ed Plan. It builds on the initial set of more than **60** interventions identified by NCCOR and the Center for Training and Research Translation (Center TRT), a CDC-funded Prevention Research Center at the University of North Carolina at Chapel Hill. Additionally, it highlights PSE and social marketing approaches and collects strategies and interventions, along with additional resources. These are categorized by the following settings and focus areas: schools, child care, communities, helping families, and social

marketing and media. Each intervention includes an Internet link to additional materials and resources that can help SNAP-Ed programs decide which interventions to use to assist in state obesity prevention efforts.

PSE strategies intend to supplement individual, group, and community-based educational strategies used by nutrition and physical activity educators in a multi-component program delivery model. Education and marketing combined with PSE is more effective than any strategy alone for preventing overweight and obesity. Some strategies are designed specifically for implementation in the environmental settings where people eat, learn, live, play, shop, and work. These may be referred to as changes in organizational environments, standards, and rules. Other strategies are intended to support community- or population-level changes in cities, towns, counties, states, territories, and tribes.

For the first iteration of the toolkit, USDA engaged NCCOR to identify evidence-based obesity prevention strategies and interventions appropriate for SNAP-Ed. The interventions spanned the continuum of scientific evidence from research-tested to practice-tested to emerging programs. USDA also received help from Center TRT. The [Center TRT website](#) is a useful tool for states, as it provides detailed intervention information, including required resources and materials. During the current revision process, USDA also engaged ASNNA to create a rigorous solicitation and peer-review process for the inclusion of new strategies, interventions, and resources. Using a scoring

tool, each new intervention was awarded points based on items such as the description of PSE and social marketing objectives, evaluation efforts and results, rollout of replication process and feedback mechanisms, reach, and SNAP-Ed audience representation. Including a new scoring process ensures that effective interventions are included to help SNAP-Ed implementers make decisions and choices.

FNS encourages states to consider and select interventions from the toolkit that best meet the needs of the state. FNS's Regional SNAP-Ed Coordinators can serve as a resource to help with this process. Research indicates an effective obesity prevention program takes a comprehensive approach and uses interventions across several settings. In a review of the literature on what works to prevent childhood obesity, the Agency for Healthcare Research and Quality (AHRQ) and Johns Hopkins University found that school-based diet and physical activity interventions with a home component or a home and community component prevent obesity or overweight.¹ The evidence does not identify a specific number of interventions or settings necessary for an effective obesity prevention program; however, states may use the toolkit to identify strategies and interventions that will complement the healthy eating recommendations of the [Dietary Guidelines for Americans](#) and messages from USDA's nutrition assistance programs, such as the Special Supplemental Nutrition Program for Women, Infants and Children (WIC), the Child and Adult Care Food Program (CACFP), and the School Meals Programs, as well as SNAP. As outlined in the *Dietary Guidelines*, helping individuals to make informed choices about

¹ Wang Y, Wu Y, Wilson RF, et al. Childhood obesity prevention programs: Comparative effectiveness review and meta-analysis. Comparative Effectiveness Review No. 115. (Prepared by the Johns Hopkins University Evidence-based Practice Center under Contract No. 290-2007-10061-I.) Rockville, MD:

Agency for Healthcare Research and Quality; June 2013. AHRQ Publication No. 13-EHC081-EF. Executive Summary may be accessed: <http://effectivehealthcare.ahrq.gov/index.cfm/search-for-guides-reviews-and-reports/?productid=1523&pageaction=displayproduct>

healthy eating is one of the most powerful strategies we have to reduce the onset of disease. Additional information regarding the key recommendations for a healthy eating pattern may be found on this [fact sheet](#).

To foster collaboration and determine which interventions might best fit the needs of the state's low-income population, FNS suggests that state SNAP-Ed officials consult with other state nutrition assistance program officials before choosing interventions from this toolkit to include in their SNAP-Ed Plans. In accordance with the [SNAP-Ed Guidance](#), states should identify other organizations with which to collaborate on obesity prevention activities within their states. For example, states with CDC Obesity Prevention Plans should ensure that their SNAP-Ed nutrition education and obesity prevention interventions complement, and do not duplicate, CDC Obesity Prevention Plan activities and vice versa.

This toolkit is a dynamic document. It is not an exhaustive compilation of potential strategies and interventions that are appropriate for SNAP-Ed. States are reminded that activities should be conducted according to the HHFKA, the [Interim Rule](#), *Supplemental Nutrition Assistance Program: Nutrition Education and Obesity Prevention Grant Program*, released on April 5, 2013, [SNAP-Ed Guidance](#), and other policies, considering the program's low-income target population. FNS is offering the toolkit as a starting point for ideas that states may use to further their obesity prevention efforts through SNAP-Ed. USDA will continue to work with ASNNA and NCCOR and other partners to continue refining and updating the toolkit to ensure that it provides a current list of evidence-based strategies, interventions, and resources. Visit the [SNAP-Ed Connection](#) regularly, as new strategies, interventions, and resources will be posted throughout the year.

The toolkit includes a section on evaluation of SNAP-Ed interventions that may be considered along with evaluation recommendations and requirements contained in the [SNAP-Ed Guidance](#). SNAP-Ed may cover costs associated with well-designed evaluations, and FNS encourages states to include them in their SNAP-Ed Plans as appropriate.

Effective evaluation will help to build the evidence base and identify effective and promising or emerging obesity prevention strategies and interventions. Knowledge on effective obesity prevention strategies and interventions is evolving. Examples of success can be found across the nation in states, cities, towns, tribes, and communities. But there is still much to learn, and all programs are challenged to stay up-to-date and be culturally relevant. Adding evaluations to state SNAP-Ed Plans will help to establish evidence-based practices that are needed to meet the evidence-based requirement of the HHFKA.

Table 1. Target Behaviors and Obesity Prevention and Control Strategies from CDC's National Center for Chronic Disease Prevention and Health Promotion

TARGET BEHAVIOR	PRIORITY STRATEGIES
Physical Activity Increases energy expenditure and reduces obesity-associated comorbidities	<ul style="list-style-type: none"> • Implement early care and education standards for physical activity • Implement quality physical education and physical activity in K-12 schools <ul style="list-style-type: none"> ◦ Develop, implement, and evaluate comprehensive school physical activity programs (CSPAP), which include quality physical education and physical activity programming before, during, and after school, such as recess, classroom activity breaks, walk/bicycle to school, and physical activity clubs • Promote adoption of physical activity at worksites • Increase physical activity access and outreach <ul style="list-style-type: none"> ◦ Create or enhance access to places for physical activity with a focus on walking combined with informational outreach ◦ Design streets and communities for physical activity
Breastfeeding Lowers prevalence of obesity in breastfed children <i>(Note: WIC is the lead agency for breastfeeding interventions)</i>	<ul style="list-style-type: none"> • Increase access to breastfeeding-friendly environments <ul style="list-style-type: none"> ◦ Implement practices supportive of breastfeeding in birthing facilities and child care ◦ Provide access to professional and peer support for breastfeeding ◦ Support workplace compliance with federal lactation accommodation law
Good Nutrition Reduces the risk of obesity in children and adults (USDA selected messages for consumers)	<ul style="list-style-type: none"> • Create supportive nutrition environments in schools <ul style="list-style-type: none"> ◦ Implement policies and practices that create a supportive nutrition environment, including establishing standards for <u>all</u> school foods; prohibit advertising of unhealthy foods; and promote healthy foods in schools, including those sold and served within school meal programs and other venues
<i>Increase Fruit and Vegetable Consumption</i> (Make half your plate fruits and vegetables)	<ul style="list-style-type: none"> • Increase access to healthy foods and beverages <ul style="list-style-type: none"> ◦ Provide access to healthier retail food outlets ◦ Provide access to farmers markets
<i>Increase Healthy Beverage Consumption</i> (Drink water instead of sugary drinks)	<ul style="list-style-type: none"> • Implement food service guidelines/nutrition standards in priority settings (early care and education, worksites, and communities) where foods and beverages are available
<i>Eat Fewer Energy-Dense Foods, Reduce Calories</i> (Switch to fat-free or low-fat milk; Enjoy your food, but eat less; Avoid oversized portions)	
<i>Reduce Sodium</i> (Compare sodium in foods like soup, bread, and frozen meals – choose foods with lower numbers)	

EVALUATION

What is evaluation and why is it important to invest time and resources on evaluation in your SNAP-Ed Plans?

Evaluation:

- Is a systematic process that uses objective data to learn about the strengths and weaknesses of programs and practices.
- Is essential to learn what works and how well it works so that you can direct SNAP-Ed resources to the most effective programs. In other words, evaluation is needed for effective project/program management, ensuring project/program efficiency, and importantly, program accountability.
- Produces data as a part of a continuous improvement cycle to improve SNAP-Ed interventions over time.
- Determines that programs were delivered as intended and in accordance with behavioral and public health theories of change.
- Informs program improvements needed for cultural and linguistic relevance.
- Can help achieve a greater positive impact on the nutrition and health of low-income individuals, families, and their communities.

What are the characteristics of a good evaluation?

A good evaluation:

- Provides practical and timely information that is useful for decision making, such as whether to keep, expand, modify, or drop a program.
- Is planned at the outset of the program or as early as possible in the process.
- Includes outcome data that is closely tied to the program, rather than other influences, and measures outcomes that are realistic given the intervention.
- Measures characteristics that are associated with the practical implementation of the program (process evaluation) not just the program outcomes.
- Uses reliable and validated data collection instruments or conducts formative research when developing new data collection tools for the intervention.
- Has a sound study design that allows one to associate the evaluation findings with the intervention.
- Uses clearly stated evaluation objectives that are SMART (specific, measurable, achievable, realistic, and time-specific).
- Predetermines the sample size needed to measure the expected effect(s) of the intervention. Is informed by or builds on previous research.
- Makes use, when possible, of multiple data sources, such as surveys, interviews, observations, and administrative data, if available.

For additional information on conducting sound evaluations see

<https://snaped.fns.usda.gov/professional-development-tools/evaluation>

What is the RE-AIM model for designing an evaluation?

The RE-AIM model (<http://www.re-aim.org/>) helps structure the evaluation to answer practical questions about program implementation and sustainability. Components of the RE-AIM model, as modified in the SNAP-Ed Evaluation Framework, are:

- **Reach:** The “number of people who encounter the improved environment on a regular basis and are assumed to be influenced by it”.²
- **Effectiveness:** Represented by the number of settings/sites with improved food or physical activity assessment scores using a reliable tool (e.g., Nutrition and Physical Activity Self-Assessment for Child care [NAP SACC], Communities of Excellence in Nutrition, Physical Activity, and Obesity Prevention [CX3]), School Health Index, Smarter Lunchrooms Scorecard; report actual scores). Effectiveness may include results of periodic spot checks on continued results as planned with clients, intermediaries, and partners; needed course corrections/lessons learned; and improvements.
- **Adoption:** Takes place when SNAP-Ed sites or settings put into effect an evidence-based policy, systems, or environmental change, such as those appearing in this toolkit.
- **Implementation:** Occurs when SNAP-Ed settings, or complementary venues within a system/channel, complete essential steps needed to carry out an evidence-based, multi-component initiative designed with one or more changes in written policies, organizational practices, or environmental conditions.
- **Maintenance:** Relates to the number and average percentage increase of SNAP-Ed eligible sites/systems with a plan in place for staff, training, procedures, diversified funding, human and facility resources, and other maintenance-of-effort essentials. May include metrics such as institutional resources invested in nutrition and physical activity supports or standards in terms of paid and volunteered/redirected staff (number of fulltime equivalents), cash, or in-kind supports, as well as spin-off projects, co-benefits, and return on investment (ROI).

² Cheadle A, et al. Community-Level Obesity Prevention Initiatives Using the Concept of "Population Dose" in Planning and Evaluating. *American Journal of Evaluation*. 2013. 34:(71). Available at: <http://aje.sagepub.com/content/34/1/71>

What are the costs associated with a good evaluation, and what assistance is available for this work?

Some experts recommend spending 7 to 10 percent of the program budget on evaluation. This is an allowable expense under SNAP-Ed.

Assistance for evaluation may be available from the following:

- Some SNAP-Ed programs may have internal evaluators on staff who work hand-in-hand with program staff. Other SNAP-Ed programs may contract with external evaluators from a separate agency.
- There are evaluation experts with experience in community-based evaluation programs like SNAP-Ed in your state or a neighboring state who can help you evaluate your SNAP-Ed interventions (see resources on page 9).
- Many community outreach evaluation services at colleges and universities, including Land-Grant Institutions, are already evaluating SNAP-Ed services. [CDC Prevention Research Centers, state and local health departments, and public health institutes](#) can also assist with community-based evaluation for programs like SNAP-Ed.

Where do I start with evaluation?

Start by examining the SNAP-Ed Evaluation Framework and identifying the indicators and outcome measures relevant to your evaluation questions and stakeholder needs.

- Review the Logic Model to identify indicators that are achievable in the upcoming fiscal year and those that are aspirational over time.
- State agencies and implementing agencies can choose evaluation indicators when developing their state-level SMART (specific, measurable, attainable, relevant, time-bound) objectives.
- Some indicators will require SNAP-Ed to collect the data, whereas others will use secondary data sources.
- The forthcoming *Interpretive Guide* to the SNAP-Ed Evaluation Framework will explain the utility of each indicator, how to measure it, what to measure, and recommended data collection tools and surveys.

Are there evaluation costs SNAP-Ed cannot pay for?

Evaluations should focus on specific current SNAP-Ed interventions or initiatives in your SNAP-Ed Plan. Evaluation of projects or initiatives beyond the scope of SNAP-Ed interventions or the low-income population or projects that intend to generate new knowledge or theory in the field of obesity prevention are considered research and therefore will not be approved for funding. States interested in broad research may wish to seek alternate sources of funding. For example, requests to fund the creation or validation of an evaluation tool that is not specific to the SNAP-Ed intervention would not be approved. SNAP-Ed will pay for the data collection from a low-income control group (no intervention) or comparison groups (different intervention) when such data are necessary and justified to conduct an impact evaluation of the SNAP-Ed intervention. However, SNAP-Ed funds cannot be used to pay for the portion of data collection or surveillance of populations whose incomes exceed 185 percent of the federal poverty level or the general population.

How do you evaluate policy, systems, and environmental change?

Evaluating policy, systems, and environmental change starts with identifying the primary changes to be made in an institution or community. Once the goals are in place, it is important to collect baseline data to document the current status of the policies or environments to be changed and the level of community and institutional support for the change. Then, as changes are made, those changes can be tracked and recorded over time.

Logic models can help make clear the connection between the policy and program changes that are planned and how they relate to the ultimate outcomes of improved nutrition, physical activity, and maintenance of normal body weight. Creating a logic model also helps to identify what to measure as part of the evaluation of each step along the path. An excellent resource on how to develop a logic model can be found here:

<http://www.wkkf.org/knowledge-center/resources/2006/02/wk-kellogg-foundation-logic-model-development-guide.aspx>

Documenting changes in individual behaviors regarding food or beverage choices or activity levels that will prevent overweight or obesity is valuable. The changes that take place over time can be observed in individuals, environmental settings, sectors of influence, and social and cultural norms. Choosing the right outcome measure at the right level of change is important. There are many choices. As described on page 9, the SNAP-Ed Evaluation Framework documents outcome indicators that align with the Social Ecological Model:

<http://snap.nal.usda.gov/snap/WesternRegionEvaluationFramework.pdf>

How can you make evaluation work for you?

- Plan and implement the evaluation at the onset or as early in the program as possible and identify a skilled evaluator to assist you.
- Collect practical evaluation data that will help you make timely decisions about your interventions.
- Select realistic outcomes: Don't expect too much, and measure at the appropriate point in the logic model.
- Give evaluation the same importance as all other aspects of the program...it will serve you well!

Where can I learn about effective obesity prevention evaluation?

Other tools and resources will be specified in the forthcoming *Interpretive Guide to the SNAP-Ed Evaluation Framework*. The following resources may also be helpful:

- NCCOR has created a Measures Registry, a searchable database of diet and physical activity measures relevant to childhood obesity research. Some of the environmental scanning and assessment tools may be relevant to SNAP-Ed. The registry can be found here: <http://nccor.org/projects/measures/index.php>
- [Healthy Eating Research \(HER\)](#) is a national program of the Robert Wood Johnson Foundation. The program supports research on environmental and policy strategies with strong potential to promote healthy eating among children to prevent childhood obesity, especially among low-income and racial and ethnic populations at highest risk for obesity. You can contact HER at through [the contact page](#) or by calling 800-578-8636.
- [Nutrition and Obesity Policy Research and Evaluation Network \(NOPREN\)](#) is a thematic research network of CDC's Prevention Research Centers Program. Its mission is to conduct transdisciplinary nutrition- and obesity-related policy research and evaluation along a policy change continuum.

SNAP-Ed Evaluation Framework

Complementing this edition of the toolkit is the SNAP-Ed Evaluation Framework: Nutrition, Physical Activity, and Obesity Prevention Indicators. Originally developed and piloted in FNS's Western Region in 2013 and updated at the national level under the auspices of NCCOR in 2015, the evaluation framework includes a focused menu of outcome indicators that align with the SNAP-Ed guiding principles and lend support to documenting changes resulting from multiple approaches in low-income nutrition education and obesity prevention efforts. Practitioners can use the evaluation framework to identify and map out indicators of success when implementing multi-component programs and policies in environmental settings where low-income residents eat, live, learn, work, play, and shop for food as well as across states, cities, towns, tribes, and communities.

The evaluation indicators appear in a logic model format, which is a visual depiction of the short-term, medium-term, long-term, and population results. Population results in overall dietary quality, physical activity, and obesity prevention along with reductions in disparities may take years to achieve; however, there are interim markers of progress reflected in the evaluation framework that demonstrate whether comprehensive nutrition education and obesity prevention initiatives are working. SNAP-Ed programs with an approved multi-year plan will especially find value in using the logic model to identify performance outcomes on an annual basis and at the culmination of the plan. Using the evaluation framework will enable SNAP-Ed programs to monitor and evaluate the implementation and effectiveness of the strategies and interventions in this toolkit while also communicating outcomes to SNAP-Ed stakeholders and funders.

The current evaluation framework appears on the following page, and more details will be provided in a forthcoming *Interpretive Guide*, expected for release in 2016.

Helping Families

Farm to Work	<p>Farm to Work programs change the worksite environment by making locally grown fruits and vegetables an easy choice for employees. The program provides employees a weekly opportunity to purchase fresh produce from local farmers.</p> <p>NOTE: Activities must be in approved worksites where more than half of employees are low-wage workers.</p>	<p>Texas Department of State Health Services and Sustainable Food Center</p> <p>http://www.centertrt.org/?p=intervention&id=1171&section=2</p>
	<p>Emerging</p> <p>Harvest of the Month (California)</p> <p>Features ready-to-go tools and resources that can be used in diverse applications to support healthy eating and daily physical activity. These tools and resources can be used in a variety of settings, including schools, daycare, and afterschool programs; retail food stores and farmers markets; health clinics; food banks; and worksites.</p>	<p>California Department of Public Health</p> <p>http://harvestofthemonth.cdph.ca.gov</p>
	<p>Practice-tested</p> <p>Harvest of the Month (Michigan)</p> <p>Features read-to-go supplemental nutrition education materials that can be used in diverse applications within community, school, child care, worksite, retail and health care settings. The materials can be integrated into the core curriculum and are based on the current <i>Dietary Guidelines for Americans</i>.</p>	<p>Michigan Fitness Foundation</p> <p>http://www.michiganfitness.org/harvest-month</p>

Helping Families

<p>Just Say Yes to Fruits and Vegetables (JSY) Nutrition education initiative designed to prevent overweight/obesity and reduce long-term chronic disease risks through the promotion of increased fruit and vegetable consumption. Using nutrition education workshops and food demonstrations, JSY works to ensure low-income families in New York eat nutritious foods, make the most of their food budgets, prepare foods in a safe manner, increase physical activity, and drink healthier beverages.</p>	New York Department of Health, Bureau of Nutrition Risk Reduction http://www.jsyfruitveggies.org/
<p>Emerging</p> <p>Obesity Prevention Plus Parenting Support Home-visiting program to provide American-Indian mothers with preschool-age children (ages 9 months to 3 years) with support in making changes in lifestyle behaviors, including nutrition, physical activity, and parenting.</p>	University of Vermont http://www.ncbi.nlm.nih.gov/pubmed/12740449
<p>Evidence-based</p> <p>NOTE: Portions of this program may be SNAP-Ed appropriate. Could be done in collaboration with others. Costs of home visits may be prohibitive.</p>	
<p>Pick it! Try it! Like it! Aims to increase consumption of fruits and vegetables by providing consumer information on selecting and preparing fresh produce.</p>	South Dakota State University Extension http://igrow.org/healthy-families/health-and-wellness/pick-it-try-it-like-it/

Helping Families

Texas Mother-Friendly Worksite Program An employer recognition program that designates worksites as “Mother-Friendly” if they voluntarily develop and submit a written policy that supports employees’ efforts to combine continued breastfeeding with employment. The policy must meet certain minimum requirements to receive “Mother-Friendly” recognition. NOTE: Activities must be in approved worksites where more than half of employees are low-wage workers.	Texas Department of State Health Services http://texasmotherfriendly.org/ http://www.centertrt.org/?p=intervention&id=1182
Practice-tested Text2BHealthy Text message-based program that targets low-income parents of elementary school children receiving nutrition education in the state of Maryland. This program aims to stimulate positive behavior change in parents with respect to grocery shopping habits, fruit and vegetable consumption, and physical activity.	FSNE -- University of Maryland Extension https://extension.umd.edu/fsne/fsne-adult-programs/text2bhealthy
Research-tested Walk with Ease A community-based physical activity and self-management education program that can be done by individuals using the Walk With Ease guidebook on their own or by groups led by trained leaders. While walking is the central activity, Walk with Ease is a multi-component program that also includes health education, stretching and strengthening exercises, and motivational strategies.	Arthritis Foundation http://www.arthritis.org/living-with-arthritis/tools-resources/walk-with-ease/
